MICROSOFT AZURE SECURITY MONITORING & ALERTING

Microsoft Azure provides a flexible cloud infrastructure designed to meet your evolving business needs. Azure offers physical security, instance isolations as well as protection for the foundation services; however, in a public cloud environment, security is a shared responsibility. It is up to you to protect and maintain compliance for the workloads you deploy in Azure.

Unlike other solutions that have been retrofitted to work in cloud evironments and require significant effort to implement and maintain, the En Pointe's Security as a service for Azure was built from the ground up for cloud environments. Our fully manged cloud-based solutions eliminate both the cost and complexity associated with trying to make legacy security and compliance products work in the cloud.

We bring together the technology and people organizations need to rest easy every day. With our Security-As-A-Service solution for on-premises, cloud, and hybrid infrastructure, organizations receive deeper insight, maintain continuous protection, and lower the cost associated with security and compliance.

FEATURES:

o   24/7 real-time monitoring, alerting, and analysis
o   Security-As-A-Service solution
o   Integrated business intelligence and analytics
o   Asset classification and reporting
o   Flexible and customizable reporting
o   Easy integration with existing solutions
o   Pre-built security reports
o   Full Security Portal access and functionality

MEET THE CHALLENGE. MAINTAIN THE EDGE.
