Copado Case Study

Securing DevOps from Pipeline to Production

Copado Case Study

Foresite partnered with Copado to deploy and operationalize Google SecOps through Catalyst Bridge—delivering transparent, AI-powered threat detection across CI/CD pipelines and containerized workloads.

The Challenge

Copado needed to secure fast-moving DevOps pipelines and container workloads—without slowing innovation or compromising trust. Their internal team struggled with tool sprawl, alert fatigue, and limited automation. Most critically, they had to detect threats in real time without accessing customer-sensitive workloads, demanding a transparent, cloud-native solution that delivered full visibility and control.

The Solution

Foresite deployed Google SecOps through Catalyst Bridge to deliver unified detection, enriched correlation, and runtime visibility—without requiring direct access to sensitive data. The project included data integration, parser development, detection & response engineering, and operational enablement—all delivered as a fully managed service that replaced legacy MDR tooling.

The Outcome

Copado now runs a transparent, scalable SecOps foundation with real-time visibility and AI-powered detection. Alert volume has been dramatically reduced, and response times have improved through automated triage and SOAR. Delivered via Catalyst Bridge, the solution requires no customer data access—giving Copado full control, faster operations, and a security model that scales with their DevOps velocity.

About Copado

Copado is a leading DevOps platform for Salesforce, enabling enterprise teams to release faster, innovate securely, and eliminate the pain of release days. Its platform powers CI/CD and automated testing for global engineering organizations.

About Foresite Cybersecurity Inc.

Foresite is a Google-first cybersecurity partner helping organizations turn security from a barrier into a catalyst—operationalizing SecOps, simplifying compliance, and securing cloud-native environments.

Products

Google SecOps

Catalyst Bridge

“If I turned off this stack today, I’d be risking \$64M in revenue. That’s how critical Google and Foresite are to our security.”

Joe McGee,
Security Operations Manager, Copado
