hMetrix Case Study

hMetrix Case Study

Foresite partnered with hMetrix to deploy and operationalize Google SecOps, delivering modernized detection and response, consolidated SOAR workflows, and fully managed security operations tailored for the healthcare industry.

The Challenge

As a leading provider of healthcare data analytics, hMetrix faced the dual pressure of scale and regulation. Their existing approach created gaps in visibility and inefficiencies in response, making it difficult to keep pace with both operational demands and compliance requirements. They needed a modernized SecOps foundation to consolidate processes, strengthen detection, and ensure consistency across complex systems—without adding overhead.

The Solution

Foresite delivered a full-spectrum approach combining Google SecOps deployment, team enablement workshops, custom playbook design, and seamless migration support. By uniting engineering expertise with continuous managed operations, Foresite established a future-ready security environment that integrated automation into daily workflows and positioned hMetrix for long-term resilience.

The Outcome

Today, hMetrix operates on a transparent, scalable SecOps foundation built on Google SecOps and managed by Foresite. Real-time detection and automated response reduce mean time to respond, while centralized SOAR workflows eliminate duplication and human error. Ongoing tuning by Foresite experts ensures performance continues to improve, delivering resilient security operations that scale with hMetrix's growth and meet the high bar of healthcare compliance.

About hMetrix

hMetrix provides healthcare business intelligence and data science solutions for payers, providers, and employers. Their services include population health analytics, value-based care enablement, and performance improvement for healthcare systems.
