

Wiz gives you visibility into cloud risk. Foresite turns that visibility into action – across any cloud.

Version: 1.0
Revised: June 5th, 2026

Nexus with Wiz

Your path to managed cloud security

Most organizations know they have cloud risk, they just don't know where it lives, how bad it is, or who fixes it. **Foresite's three-stage journey takes you from first visibility to fully managed cloud security**, at whatever pace your business requires.

STAGE 01

Wiz Health Check
3 TO 5 DAYS

Agentless assessment: see your cloud risk clearly, with zero operational disruption

STAGE 02

Wiz Deployment
SPRINT BASED

Sprint-based implementation — tuned, integrated, and live on a date you can plan against.

STAGE 03

Nexus
ONGOING

Fully managed cloud security: monitored, triaged, and SOC-integrated, as a service.

	Wiz Health Check STAGE 01	Wiz Deployment STAGE 02	Nexus STAGE 03
Duration	3 to 5 Days	Sprint based	Ongoing
Wiz platform	Customer tenant	Customer tenant, Foresite-deployed	Customer tenant, Foresite-managed
Primary output	Risk report + roadmap	Production-ready Wiz environment	Continuous managed security
Foresite role	Security Consultant	Security Engineers + PM	Security Analysts + Engineers
Compliance value	Baseline gap assessment	Framework alignment & tuning	Continuous evidence & reporting
Google SecOps	Not required	Optional Integration	Fully operational & maintained

STAGE 01 Wiz Health Check

Before you can manage cloud risk, you need to see it clearly. A time-boxed, agentless assessment of your cloud environment. Delivered by Foresite engineers on the Wiz platform with zero agents and zero operational disruption.

- ✔

Connect Wiz to your cloud: AWS, Azure, GCP, OCI — typically in hours, not weeks
- ✔

Map your environment against CIS, NIST, SOC 2, ISO 27001 compliance benchmarks
- ✔

Receive a prioritized findings report with expert Foresite commentary — not raw scanner output
- ✔

Identify misconfigurations, exposed secrets, vulnerable workloads, and toxic risk combinations
- ✔

Assess your cloud-to-code attack surface, including IaC and pipeline security posture

STAGE 02

Wiz Deployment

Wiz only delivers value when it's correctly deployed, tuned, and integrated. Foresite runs a sprint-based implementation with defined objectives, clear milestones, and a go-live date you can plan against.

Cloud Connector Setup All cloud accounts & code repos connected and validated.

SIEM / SOAR Integration signals ingested into Google SecOps (Chronicle); bidirectional SOAR for issue lifecycle. (If applicable)

Workflow Integrations Ticketing connected so findings flow into your existing processes.

Handoff & Enablement Customer team trained; documentation and runbooks delivered before the engagement closes.

SSO & Identity Integration Single sign-on configured; Wiz Projects mapped to your org structure for access control.

Policy & Compliance Tuning Baselined to your environment; noise reduced, high-signal findings promoted to your SOC.

Wiz Defend Activation Cloud Detection & Response enabled with real-time rules tuned to your cloud topology.

STAGE 03

Nexus

Deployment gets you live. Nexus keeps you secure — fully managed cloud security: platform management, continuous posture monitoring, expert triage, and SOC-integrated response.

Continuous CSPM 24/7 posture monitoring with analyst review of high-severity findings.

Compliance Reporting Managed evidence collection and posture dashboards..

Google SecOps Integration Wiz Cloud, Wiz Code, and Wiz Defend signals into Chronicle; SOAR maintained and tuned.

Incident Response Foresite's SOC instantly responds to threats flagged by Wiz Defend.

Vulnerability Management Ongoing agentless scanning with risk-ranked findings.

Wiz Platform Management Policy tuning, connector health, licenses, and upgrades — hands-off for your team.

Dedicated TAM A named Technical Account Manager owns your cadence — biweekly reports, reviews, QBRs.

Start anywhere. Land on Nexus. Begin with a Health Check, a Deployment, or jump straight to managed, Foresite meets you where you are.
