

From first visibility to fully managed, a three-stage journey delivered with Wiz and Google SecOps, by Foresite.

Version: 1.0
Revised: June 6th, 2026

SCC to Wiz Migration

Your cloud visibility is about to get better

See what's broken across all your clouds, and operationalize the response in one platform.

SCC Enterprise showed you what was broken in GCP, and only the pieces SCC could see. Now imagine understanding which risks are actually exploitable, across every cloud, from one unified platform. That moment is now.

Your current reality

Where you stand depends on your SCC tier, but the opportunity to see more is the same for everyone.

THE MIGRATION, AT A GLANCE

SCC Enterprise
GCP-only · EoL May 2027

GOOGLE RECOMMENDED PATH

Operates Wiz & responds

Scale & response, when it's time

IF YOU'RE ON SCC ENTERPRISE A MIGRATION PLAN IS REQUIRED

May 21, 2027 SCC ENTERPRISE END-OF-LIFE

- Google's recommended path is Wiz + Google SecOps - an upgrade, not a like-for-like swap.
- Visibility stops at GCP. AWS, Azure and OCI are blind spots.
- Your SIEM only understands SCC findings: email, code, identity and container signals stay invisible.
- No operationalization layer. Investigation and response stay manual and disconnected.

IF YOU'RE ON SCC STANDARD OR PREMIUM NO FORCED TIMELINE

No EoL pressure RUN AS LONG AS YOU LIKE

- You have time, but the same opportunity applies. You're seeing GCP only today.
- Wiz adds multicloud visibility across AWS, Azure, GCP and OCI in one platform.
- Google SecOps is an optional upgrade when you want a modern operational SIEM/SOAR.
- Don't wait too long - multicloud visibility grows more valuable every day.

The modern cloud security stack

Wiz finds what's broken across every cloud and tells you which risks are reachable, exploitable and impactful. Google SecOps turns that context, plus every signal, into automated investigation and response.

MULTICLOUD VISIBILITY

Visibility that actually matters, not just discovery, but context.

- Across all clouds: AWS, Azure, GCP and OCI in one platform.
- Shows what's broken and which risks are reachable, exploitable and impactful.
- Full context: code risks, runtime threats, identity exposure, data paths and supply chain.
- Google's recommended transition path for customers leaving SCC Enterprise.

Google Security Operations

A modern SIEM/SOAR that ingests everything and acts on it.

- Ingests everything: Wiz findings, email, identity, code, container, audit logs, VPC flows and DNS.
- Wiz Defend acts as your Cloud EDR — runtime threats feed in automatically.
- ML-powered correlation turns scattered signals into one unified story.
- Automated response: SOAR workflows trigger investigation and remediation.

Old stack vs. new stack

DIMENSION	SCC ENTERPRISE — WHAT YOU HAD	WIZ + GOOGLE SECOPS - WHAT'S NEXT
Visibility	GCP-only	Multicloud - AWS, Azure, GCP, OCI
Depth	What's broken	What's broken + which risks are exploitable
SIEM	Limited to SCC findings	Ingests all telemetry - cloud, identity, email, code, network
Operationalization	Manual investigation	Automated correlation, investigation & response
Runtime detection	No Cloud EDR	Wiz Defend feeds cloud threats into SecOps
Decision support	Single platform, limited context	ML + automation makes decisions faster

Your three paths forward

STAGE 01

Wiz Health Check

3 TO 5 DAYS

Agentless assessment: see your cloud risk clearly, with zero operational disruption

STAGE 02

Wiz Deployment

SPRINT BASED

Sprint-based implementation — tuned, integrated, and live on a date you can plan against.

STAGE 03

Nexus

ONGOING

Fully managed cloud security: monitored, triaged, and SOC-integrated, as a service.

Why Foresite

01 We maximize Wiz value over time

As Wiz and your environment evolve, we keep unlocking value, features, integrations, optimization.

03 We operate Wiz at production scale - today

Already running Wiz in production across customer environments, at Google SecOps scale.

02 We understand Wiz as a complete platform

The power is in Wiz Cloud, Wiz Defend, and Wiz Code together. We activate all three at your scale.

04 We're measured on your success

We're judged on whether Wiz stays tuned, threats get answered, and posture improves.

Let's make your cloud visibility better. SCC Enterprise EoL: May 21, 2027 - most migrations land Q4 2026 / Q1 2027.

Cloud Visibility Assessment

45 min, no commitment. We map your footprint and show what Wiz + SecOps unlock.

Phased migration we've helped dozens of teams migrate without disrupting their SOC.
