

From first visibility to fully managed, a three-stage journey delivered with Wiz and Google SecOps, by Foresite.

Version: 1.0
Revised: June 6th, 2026

Your Wiz Journey

Your path to managed cloud security

Wiz gives you visibility into cloud risk. Foresite turns that visibility into action, across any cloud.

Deploying Wiz is the easy part. Operating it, tuning it to your environment, flowing detections into your SOC, investigating and responding to threats - is the work. That's where most deployments stall, and it's exactly what Foresite runs for you.

THE OPERATING MODEL

Detects cloud risk & threats

Operates Wiz & responds

Scale & response, when it's time

Wiz + expert operations = full platform value

Wiz is a comprehensive, multicloud platform: Wiz Cloud visibility, threat detection with Wiz Defend, and code security with Wiz Code. Getting maximum value from all three takes intentional tuning, integration, and continuous attention.

WIZ DETECTS

**Risk & threats,
across every cloud**

Wiz Cloud

Wiz Defend

Wiz Code

FORESITE OPERATES

**The operations layer between
detection and response**

Tuning

Integration

24/7 response

Compliance

YOU FOCUS

**On security
strategy &
remediation**

Outcomes

Posture

The reality

Most teams run Wiz well, but often at 60–70% feature depth. Maybe Code is dormant, or triage is manual when automation could handle 80% of it. There's untapped value waiting to be unlocked.

As Wiz evolves

Google Cloud's acquisition is expanding what's possible - new integrations with Google SecOps and Google Threat Intelligence. Foresite helps you adopt new capabilities as they become relevant to you.

PATH 01

Wiz Health Check

Assessment • 3–5 days

When: You're evaluating Wiz or recently deployed it and want clarity on where to focus.

- Map your entire cloud estate — AWS, Azure, GCP, OCI
- Assess feature depth: active, dormant, untapped value
- Surface threat-detection & code-security opportunities
- Align compliance frameworks to Wiz capabilities
- Prioritized feature-enablement roadmap

**Clarity on your
Wiz potential.
A roadmap for
action.**

PATH 02

Implementation & Integration

Feature activation · Sprint-based

When: You've signed Wiz and want the full platform – Cloud, Defend or Code – deployed intentionally.

- Multi-feature activation, tuned for your environment
- Cloud connectors validated across every account
- Wiz findings flowing into your SOC automatically
- Workflow automation — Jira, ServiceNow, Slack etc.
- Future-ready architecture + team enablement

Full platform operational.
Ready to grow with Wiz.

PATH 03

Managed Wiz Operations

Nexus · Ongoing

When: You want Wiz continuously optimized as your environment and the platform evolve.

- Continuous tuning & policy optimization as you change
- 24/7 Wiz Defend monitoring with analyst investigation
- Automated response & incident handling
- Continuous compliance evidence & audit readiness
- Dedicated TAM, health reports, and QBRs

Wiz continuously optimized.
You focused on outcomes.

Why Foresite

01 We maximize Wiz value over time

As Wiz and your environment evolve, we keep unlocking value, features, integrations, optimization.

03 We operate Wiz at production scale – today

Already running Wiz in production across customer environments, at Google SecOps scale.

02 We understand Wiz as a complete platform

The power is in Cloud, Defend, and Code together. We activate all three at your scale.

04 We're measured on your success

We're judged on whether Wiz stays tuned, threats get answered, and posture improves.

Ready to make your Wiz deployment work? Start where you are – Health Check to prove it, Implementation to go live, Nexus to have it all handled.
