MERGE Case Study

Unifying Multi-Cloud Security Operations

MERGE Case Study

Foresite partnered with MERGE to migrate off a legacy SIEM and operationalize Google SecOps and Security Command Center Enterprise—unifying visibility across a multi-cloud estate and supporting HITRUST and SOC 2 objectives.

The Challenge

MERGE, a marketing and technology agency, ran security across a multi-cloud estate spanning Azure and Google Cloud, against a hard deadline to migrate off their incumbent SIEM and SOC provider before contract expiration. They needed unified visibility across more than fifteen log sources, evidence for HITRUST and SOC 2 requirements, and a partner who could advance their security operations rather than swap one tool for another.

The Solution

Foresite architected a phased modernization. A Google Workspace and Google Cloud assessment and proof of concept established value before commitment, followed by full migration to Google SecOps under Foresite's Catalyst Citadel MXDR. SCCE centralized cloud posture management, with Google Threat Intelligence and BindPlane completing telemetry and detection coverage. Vulnerability management and penetration testing extended the program beyond SIEM.

The Outcome

MERGE now runs one security operations platform across its multi-cloud footprint, managed by Foresite with named practitioners validating high-impact actions. Consolidated tooling and AI-native detection deliver the unified visibility they lacked, while SCCE centralizes HITRUST evidence. A SIEM migration became a multi-year program spanning detection and response, cloud posture, vulnerability management, and penetration testing.

About MERGE

MERGE is a marketing and technology agency that unites strategy, creative, and technology to deliver performance for clients across healthcare, financial services, and consumer brands.

North America

About Foresite Cybersecurity Inc.

Foresite is a Google-first cybersecurity partner helping organizations turn security from a barrier into a catalyst—operationalizing SecOps, simplifying compliance, and securing cloud-native environments.

Products, Google SecOps, Google SCCE, Google Threat Intelligence, Catalyst Citadel

“Our security program is built around governance, compliance, and continuous improvement. Foresite and Google have been key partners in bringing that vision to life across all our environments.”

Roze San Nicolas,
Director of Information Security, MERGE
