

CLOUD SERVICES SECURITY ASSESSMENT

Moving data to the cloud doesn't transfer your liability to protect it!

ONGOING

Foresite can perform vulnerability management of your cloud environment on a recurring schedule.

POLICY/PROCESS

Foresite will assist with either enhancing your current cloud policies or developing policies and processes for secure cloud management.

CONSULTATION

Foresite's certified subject matter experts will consult with your team for understanding the risks involved with each type of cloud deployment.

MANAGEMENT

Foresite will advise your team in developing a process to manage and evaluate all your 3rd party cloud vendors.

PLANNING

Foresite helps you develop your plan to move to the cloud, or to remediate risk from existing deployment(s).

It's a common misconception that by moving systems into the cloud, or relying on a third-party cloud service provider to process and store data, that the full responsibility to protect the data falls on the vendor. Not so. It is still your data and if your vendor is breached, it is still your liability.

This means it is critical that organizations perform due diligence and due care when moving data to the cloud. The level of diligence and care will depend on many variables such as legal and regulatory compliance requirements, type(s) of data, type of cloud services, etc.

Foresite combines our industry expertise with known best practices to assist you in performing proper due diligence and due care in working with your cloud vendors.
