

Foresite Cybersecurity Presents

CYBERSECURITY RISK ASSESSMENT

How to secure your digital home

FIND YOUR ENTRYWAYS

Inventory all internet-connected devices in your business. This is how attackers will try to breach.

IDENTIFY YOUR VALUABLES

Not all your data & systems are equal. Prioritize based on magnitude, timescale, origination, impact, and affected parties.

ASSESS THE THREATS

Are you worried about attackers forcing their way in? Is your biggest risk an insider with too much access? It's time to consider where your threats exist.

PRIORITIZE & DEFEND

Once you know the how, what, and who, you're ready to create a plan of action to improve your cybersecurity defenses.

RINSE & REPEAT

Security challenges and threats are constantly changing. Choose a security maturity framework and proactively monitor your environment for the best chance of catching issues before they become problems.
